iAssessment's 'Smart' Portal Personalizes, Expands K-12 Solutions

iAssesment has released the GPS smartPortal, a Web-based gateway that unifies the K-12 data center to enable the personalized delivery of relevant educational resources based on each user's unique needs. Going beyond merely making such applications and content accessible, GPS smartPortal proactively guides users to relevant resources, helping K-12 organizations maximize investments in technology and activate their use to improve education. The solution automates core education processes from program and grants management to online skill assessment and educator professional development - all from a single user interface.

[Arizona School Services through Educational Technology](#) (ASSET), a program of the Arizona State University's KAET public broadcasting services, is the first educational organization to implement the GPS smartPortal. As an extension of its MyCompass program, ASSET is enabling quick and easy access to online resources for more than 20,000 educators statewide in Arizona. For more information on iAssessment's GPS smartPortal, visit <http://www.iassessment.com>.
