

PBS LearningMedia

Setting Browsing History in Firefox

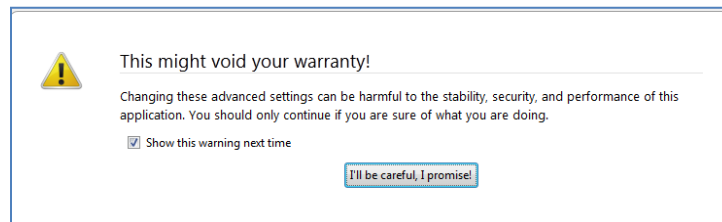

When creating a **Class Page** and working with **My Favorites**, there is a setting in Firefox that allows a more fluid experience. If you have **Favorited** a resource inside of PBS LearningMedia, and the resource does not show up in **My Favorites**, changing the Firefox setting will take care of the issue.

Also, if your **Class Page** does not seem to be working as it should, changing the Firefox setting should help.

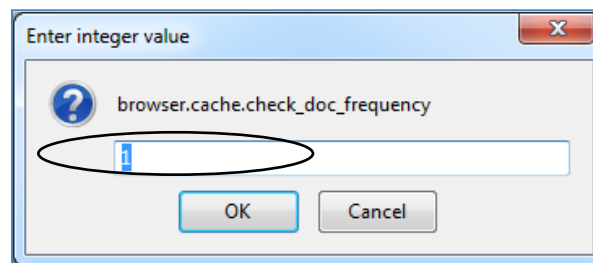

1. While Firefox is open, in the address bar, type **about:config**. Press **Enter** on your keyboard.

2. You may see a “**This might void your warranty!**” message. **Click the I’ll be careful, I promise! Button.**

3. You are looking for the Preference Name, **browser.cache.check_doc_frequency**. You can either type that in the Filter Bar, or you can scroll down and look for it. When you find it, double click on it. Where it says **Enter integer value**, type in the number **1**. Click **OK**.

4. Close the about:config tab in Firefox, and begin using PBS LearningMedia.
